# 1 Introduction

## 1.1 Intended Use

The contamination indicator BCI 24 is used to monitor the filter capacity in oil circuits. A microprocessor-controlled pressure transmitter monitors the pressure drop above the filter element which increases as the filter contamination increases.

### WARNING

All device models are solely intended for industrial applications. They are **not safety components**. The devices must not be used if failure or malfunction thereof jeopardises the safety and health of persons.  
Use in explosive areas is **prohibited**.

## 1.2 Model key

BCI 24 - D  3   -

### Type designation

BCI Contamination indicator

### Process connection

compatible with third-party products

H Hydac/Stauff G1/2  
M Filtration Group/Bosch Rexroth M20x1,5  
F MP-Filtri G1/2  
C Eaton G1/2

### Options/outputs

0 - 2S1A 2 x switching output / 1 x analog  
7 - 1D1S 1 x switching output / IO-Link

### Pressure drop range

3 max. 3 bar  
6 max. 6 bar

## 1.3 Contents

- Contamination indicator BCI 24
- Product Documentation

## 2 Safety instructions

### 2.1 Important advice

Operation of the device is only permitted if:

- the product is used under the conditions described in the installation- and operation instruction, the intended application according to the type plate and the intended use. In case of unauthorized modifications done by the user Bühler Technologies GmbH can not be held responsible for any damage,
- when complying with the specifications and markings on the nameplates.
- the performance limits given in the datasheets and in the installation- and operation instruction are obeyed,
- monitoring devices and safety devices are installed properly,
- service and repair is carried out by Bühler Technologies GmbH,
- only original spare parts are used.

This manual is part of the equipment. The manufacturer keeps the right to modify specifications without advanced notice. Keep this manual for later use.

### Signal words for warnings

|                |   |
|----------------|---|
| <b>DANGER</b>  | Signal word for an imminent danger with high risk, resulting in severe injuries or death if not avoided.  |
| <b>WARNING</b> | Signal word for a hazardous situation with medium risk, possibly resulting in severe injuries or death if not avoided.                              |
| <b>CAUTION</b> | Signal word for a hazardous situation with low risk, resulting in damaged to the device or the property or minor or medium injuries if not avoided. |
| <b>NOTICE</b>  | Signal word for important information to the product.   |

### Warning signs

These instructions use the following warning signs:

|   |                           |   |                     |
|---|---------------------------|---|---------------------|
|  | Warns of a general hazard |  | General information |
|  | Voltage warning           |  | Unplug from mains   |
|  | High pressure warning     |   |                     |

### 2.2 General hazard warnings

The equipment must be installed by a professional familiar with the safety requirements and risks.

Be sure to observe the safety regulations and generally applicable rules of technology relevant for the installation site. Prevent malfunctions and avoid personal injuries and property damage.

#### The operator of the system must ensure:

- Safety notices and operating instructions are available and observed,
- The respective national accident prevention regulations are observed,
- The permissible data and operational conditions are maintained,
- Safety guards are used and mandatory maintenance is performed,
- Legal regulations are observed during disposal,
- compliance with national installation regulations.

## **Maintenance, Repair**

Please note during maintenance and repairs:

- Repairs to the unit must be performed by Bühler authorised personnel.
- Only perform conversion-, maintenance or installation work described in these operating and installation instructions.
- Always use genuine spare parts.
- Do not install damaged or defective spare part. If necessary, visually inspect prior to installation to determine any obvious damage to the spare parts.

Always observe the applicable safety and operating regulations in the respective country of use when performing any type of maintenance.

## 3 Transport and storage

Only transport the product inside the original packaging or a suitable alternative.

The equipment must be protected from moisture and heat when not in use. It must be stored in a covered, dry, dust-free room at room temperature.

## 4 Installation and connection

### DANGER

#### Electric voltage

Risk of electric shock

- De-energise the system.
- The equipment may only be installed, maintained and put into operation by instructed, competent personnel.
- Always observe the applicable safety regulations for the operating site.

### DANGER

#### Toxic, acidic gases/liquids

Protect yourself from toxic, corrosive gasses/liquids when performing any type of work. Wear appropriate protective equipment.

### 4.1 Installation

The equipment must be installed by a professional familiar with the safety requirements and risks.

### DANGER

#### Electric voltage

#### Risk of electric shock

When connecting devices, please note the maximum voltages and currents (see technical data) and use the correct wire cross-sections and circuit breakers. When selecting the connection lines, also note the maximum operating temperatures of the devices.

### WARNING

#### System pressurised

De-pressurize the system prior to assembly.

The contamination indicator BCI 24 screw directly into the line filter. Tighten the BCI 24 to a torque of approx. 25 Nm. Be sure the seal (copper ring, O-ring or NBR sealing ring, varies by version) is in perfect condition.

### NOTICE

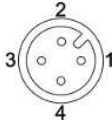

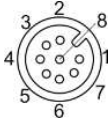

The top and bottom of the BCI 24 match. Therefore do not use a different top. The system could otherwise be damaged. However, loosening a locking screw allows turning the top so the cable outlet of the M12 plug connector can be repositioned as needed. Then secure the screw hand-tight!

## 4.2 Electrical connections

The BCI contamination indicator is powered with +18-30 V direct voltage. The sensor connects with a cable and standard M12 plug-in connectors.

### 4.2.1 Pin assignment

| Version              | 1D1S  | 2S1A  |
|----------------------|---|---|
| <b>Plug</b>          | <b>M12<br/>4-pin</b>  | <b>M12<br/>8-pin</b>  |
| Connection schematic |  |  |
| <b>Pin</b>           |   |   |
| 1                    | +24 V DC  | +24 V DC  |
| 2                    | S2 (PNP), max. 200 mA   | GND   |
| 3                    | GND   | PNP OUT1, max. 200 mA   |
| 4                    | C/Q (IO-Link)/S1  | NC  |
| 5                    |   | Analog OUT4 - 20 mA   |
| 6                    |   | PNP OUT2, max. 200 mA   |
| 7                    |   | NC  |
| 8                    |   | NC  |
|                      | S1 = HnO 75 %<br>S2 = HnO 100 %<br>adjustable via IO-Link                         | OUT1 = HnC 75 %<br>OUT2 = HnC 100 %<br>not adjustable                             |

## 5 Operation and Control

### NOTICE

The device must not be operated beyond its specifications.

### 5.1 Version with analog and switching outputs (2S1A)

With this version the switching outputs are the primary signals.

To ensure the switching outputs respond, the respective threshold must be overrun for at least 4 seconds. This will avoid the system responding too soon if the brief pressure peaks occur.

Switching output 1 is configured as NC contact with increasing pressure drop. This switching output opens at 75 % of the set pressure drop measuring range.

Switching output 2 is configured as NC contact with increasing pressure drop. It opens at 100 % of the set pressure drop measuring range.

All switching outputs are reset automatically.

The analog output supplies a 4-20 mA current signal proportional to the set pressure drop measuring range.

**Attention! For technical/physical reasons the lower 10 % of the measuring range are hidden. Within this range the output current remains at 4 mA until the release threshold is reached. This version has signal suppression for temperatures < 30 °C! If the device temperature is < 30 °C, the current remains at 4 mA and the switching outputs remain in the basic position.**

### 5.2 Version with IO-Link interface (1D1S)

This unit is equipped with an IO-Link interface, which require an IO-Link master.

The IO-Link interface allows direct access to process and diagnostics data, and allows configuring the unit during operation.

The IODDs required to configure the unit is available at <https://ioddfinder.io-link.com> will appear.

If the IO-Link interface is not being used (no master or only used to parametrise), the BCI 24 functions as a regular pressure drop switch with 2 switching outputs.

Switching output 1 is configured as NO contact with increasing pressure drop. This switching output closes at 75 % of the set pressure drop measuring range.

Switching output 2 is configured as NO contact with increasing pressure drop. This switching output closes at 100 % of the set pressure drop measuring range.

However, they can be parametrised via IO-Link master.

For more information please visit: [www.io-link.com](http://www.io-link.com)

## 6 Cleaning and Maintenance

Regularly check sealing screw connections for leaks, particularly if vibration may occur. Apart from this the device is maintenance-free.

The method for cleaning the devices must be adapted to the IP protection class of the devices. Do not use cleaners which could damage the device materials.

## 7 Service and repair

This chapter contains information on troubleshooting and correction should an error occur during operation.

Repairs to the unit must be performed by Bühler authorised personnel.

Please contact our Service Department with any questions:

**Tel.: +49-(0)2102-498955** or your agent

If the equipment is not functioning properly after correcting any malfunctions and switching on the power, it must be inspected by the manufacturer. Please send the equipment inside suitable packaging to:

**Bühler Technologies GmbH**

**- Reparatur/Service -**

**Harkortstraße 29**

**40880 Ratingen**

**Germany**

Please also attach the completed and signed RMA decontamination statement to the packaging. We will otherwise be unable to process your repair order.

You will find the form in the appendix of these instructions, or simply request it by e-mail:

**service@buehler-technologies.com.**

### 7.1 Removal information

The housing temperature depends on the process temperature, therefore remember when working on the device:

Allow the device to cool down before performing maintenance or repairs.

Before remove the device, ensure the system is depressurised to prevent liquid from escaping. If necessary, use a collection container.

Please observe the safety notices in chapter Setup and connection.

### 7.2 Accessories

| Item no.:  | Model                              |
|------------|------------------------------------|
| 9144050031 | M12x1 4-pin LED * 5.0 m connection |
| 9144050047 | M12x1 4-pin 5.0 m connection       |
| 9144050010 | M12x1 4-pin 1.5 m connection       |
| 9144050033 | M12x1 8-pin 5.0 m connection       |
| 9144050048 | M12x1 8-pin 1.5 m connection       |
| 9146100158 | Straight cable socket M12x1 5-pin  |

\*LED cable not compatible with active IO-Link communication. Only use in SIO mode.

## 8 Disposal

Dispose of parts so as not to endanger the health or environment. Follow the laws in the country of use for disposing of electronic components and devices during disposal.

## 9 Appendices

*Die Analyse defekter Baugruppen ist ein wesentlicher Bestandteil der Qualitätssicherung der Firma Bühler Technologies.*

*Um eine aussagekräftige Analyse zu gewährleisten muss die Ware möglichst unverändert untersucht werden. Es dürfen keine Veränderungen oder weitere Beschädigungen auftreten, die Ursachen verdecken oder eine Analyse unmöglich machen.*

*Bei elektronischen Baugruppen kann es sich um elektrostatisch sensible Baugruppen handeln. Es ist darauf zu achten, diese Baugruppen ESD-gerecht zu behandeln. Nach Möglichkeit sollten die Baugruppen an einem ESD-gerechten Arbeitsplatz getauscht werden. Ist dies nicht möglich sollten ESD-gerechte Maßnahmen beim Austausch getroffen werden. Der Transport darf nur in ESD-gerechten Behältnissen durchgeführt werden. Die Verpackung der Baugruppen muss ESD-konform sein. Verwenden Sie nach Möglichkeit die Verpackung des Ersatzteils oder wählen Sie selber eine ESD-gerechte Verpackung.*

*Beachten Sie beim Einbau des Ersatzteils die gleichen Vorgaben wie oben beschrieben. Achten Sie auf die ordnungsgemäße Montage des Bauteils und aller Komponenten. Versetzen Sie vor der Inbetriebnahme die Verkabelung wieder in den ursprünglichen Zustand. Fragen Sie im Zweifel beim Hersteller nach weiteren Informationen.*

*Analysing defective assemblies is an essential part of quality assurance at Bühler Technologies.*

*To ensure conclusive analysis the goods must be inspected unaltered, if possible. Modifications or other damages which may hide the cause or render it impossible to analyse are prohibited.*

*Electronic assemblies may be sensitive to static electricity. Be sure to handle these assemblies in an ESD-safe manner. Where possible, the assemblies should be replaced in an ESD-safe location. If unable to do so, take ESD-safe precautions when replacing these. Must be transported in ESD-safe containers. The packaging of the assemblies must be ESD-safe. If possible, use the packaging of the spare part or use ESD-safe packaging.*

*Observe the above specifications when installing the spare part. Ensure the part and all components are properly installed. Return the cables to the original state before putting into service. When in doubt, contact the manufacturer for additional information.*
